Education

Illinois Institute of Technology, Chicago IL — Graduated May, 2024
Bachelors of Science in Computer Science

Work Experience:

Backend Data Analyst — August 2024 - Current
Outside Agents — *Jacksonville, Fl*

- Lead Designer and Developer in user 'nudges' which analyze users' use of our services to encourage other services based on a curated profile, recent activity, and cohort to increase sales, subscription level, improved vendor relation, ect.
- Automated and implemented these systems live to a team of developers to salesmen through AWS.
- Spearheaded the development of a data integration and analysis through PostgreSQL/MongoDB, to automate the extraction for both internal and client-facing data platforms.
- Designed and implemented an advanced user categorization algorithm that dynamically categorizes and ranks clients based on live interaction metrics (ie. Sales/Marketing/Training) to significantly enhance the personalization of marketing strategies.
- Assisted in the integration of the ChatGPT API with the creation of a specialized user database, enabling dynamic, tailored responses based on individual user behavior and preferences, strategically designed to boost user engagement and drive increased activity across our platforms.
- Designed many dashboards, both user and admin, focused on showing growth and standouts in sales/training/marketing to highlight and compare our performance in both recent standouts and complete history.

Work Experience Skills:

MongoDB
PostgreSQL
AWS
ChatGPT-API

Programming Languages:
Python
C / C++
SQL
Java
JavaScript

Skills:

Computer Science Chosen Electives Titles:

Intro to Machine Learning - Intro to Artificial Intelligence

Unique Projects Via Classes:

- Leader using Raspberry Pi with live sensor data sent to API, viewed in Unreal 5 VR
- Created an Operating System, kernel, scheduler ect. all from scratch using C

Independent Projects:

- DemonHacks Hackathon CTA Award Winner October 2019
  - Simulated live data of people per train car through API displayed on TV
- Created 2 video games from scratch as lead programmer
  - Using Unity, made a First Person Shooter with custom animations
  - Using Python, made a Asteroids like game involving calculus for physics
- Created password manager with custom encryption that also require Apple's encryption
